

Track anything that moves. Monitor everything that shouldn't.

Asset-Edge utilises advanced technologies such as GPS location tracking, Bluetooth, and NB-IOT communication to provide innovative and cost-effective asset management and sensor monitoring solutions that are future-proof.

Our cutting-edge asset tracking device is designed to withstand rugged conditions, operates on battery power, and can function both indoors and outdoors. Additionally, it features Bluetooth® Gateway and NB-IOT communication for seamless connectivity. The device's cloud-based location solving capabilities further enhance its efficiency, ensuring a battery life of over 10 years, making it an eco-friendly and sustainable solution for businesses seeking long-term asset management solutions.

Indoor/Outdoor

GNSS, Wi-Fi AP MAC Address Scanning, and Cell Tower location for seamless indoor/outdoor asset management.

Bluetooth® 5.2

Reports on nearby Bluetooth tags and sensors for affordable tagged asset management and sensor monitoring applications.

'Deploy Once' Battery Life

Over 10+ years battery life on only 3 x AA user-replaceable batteries. It also sends "Battery Low" and "Battery Critical" alerts.

Cloud-Based Location

Position calculations are handled in the cloud (versus on-device) for substantial power savings.

Adaptive Tracking

Periodic or optional movement based tracking - tracks assets throughout the day and/or when movement occurs, entering sleep mode when inactive to conserve power and data usage.

Ultra Rugged

Weatherproof and ultra-rugged IP68, IK07 housing.
