

## TO RESOLVE ISSUES, YOU MAY NOT HAVE EVEN THOUGHT ABOUT

EV-Eye is latest in the range of fleet-eye products, it's a one box solution that delivers the very best of EV-Vehicle telematics with an internal GPS modem. The device is click and play and will provide data/reports to resolve issues you may not have even considered yet.

The data/reports can be visualised by means of an API, white labelled platform, or i-pane within your existing software suite. An App is also available.

We know that not all users require the same information, so we have 3 versions:

- Fleet operator
- Fleet provider
- EV charger/energy provider (to be announced)

### Fleet Provider Potential Issues

- Battery Condition – In-Proper Charging Pattern, Poor Battery Condition
- When will the most cost-effective time to obtain highest residual?
- Protect High Investment
- Vehicle Recovery

### Tell Tales – Provide Live Feedback Identifying Non-Reported Vehicle Issues

- Battery Pack
- High voltage system caution
- Battery pack temperature
- Limited performance electric motor
- Battery pack cooling

## Save time through smart installation

EV-Eye is designed with a compact housing of 10 by 10 centimetres. Additional accessories and peripherals, such as contactless vehicle data readers, a Bluetooth module, etc., can be connected using smart plug-and-play connectors, drastically reducing installation time. The housing has two cable tie trays to securely attach EV-EYE to any desired location.

## Fleet Operator Potential Issues

- Remaining miles not % battery
- Maximise miles-more jobs per charge more profit
- Charging point overlay
- Driving style maintain max miles
- Odometer reading
- Home charger charge back
- Temp drop
- Eco
- Regen braking ratios
- Environmental alignment
- Mixed fleet continuity of data
- Vehicle recovery
